

Unleashing Hope: How Hamida Defied Paralysis at FMIC

1

Coping with a Challenging Health Issue

Hamida, a 12-year-old from Maidan Wardak, couldn't walk due to a debilitating condition. She felt immense frustration and sadness, unable to attend school or play with friends.

2

Unaltered Health Condition

Despite diligently seeking medical attention at local clinics and multiple private hospitals in Kabul, her health condition showed no signs of improvement or change.

3

A life-changing moment

Fortunately, a family member suggested FMIC as an option, leading Hamida to receive care from two exceptionally skilled doctors, Dr. Mirza Mohammad Najrabi and Dr. Heshmatullah Zia.

4

Factors Leading to Leg Paralysis

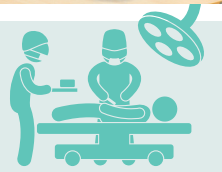

After a comprehensive physical examination and MRI, it was revealed that Hamida's paralysis in both legs resulted from a dorsal spine kyphotic deformity and vertebral collapse caused by Spine Tuberculosis.

5

Embracing Courage on the Path to Healing

FMIC's medical team conducted a successful surgery on Hamida, involving procedures such as Decompression, bone graft, and fixation resulting in substantial enhancement of her mobility.

6

Reviving Mobility

Within a mere four weeks, Hamida reclaimed her ability to walk, resume her education, and pursue her dreams and ambitions with renewed determination.

7

Resource blind access to healthcare

The family received a tremendous relief when they discovered that all treatment expenses would be covered. La Chaîne de l'Espoir is privileged to have contributed to her care, finding inspiration in her remarkable journey.
